

ESSENTIAL SAFETY

GUIDELINES FOR VISITORS

TO OUR PROJECT SITES:

For guests who are visiting our jobsites, be sure you receive a clear safety orientation from a member of our team and the appropriate personal protective equipment (PPE) to wear. In the meantime, here are some essential safety guidelines we'd like you to follow so you can plan ahead for your visit:

- Stay with your designated guide at all times.
- Wear hard soled shoes or boots (no open toe shoes, sandals or high-heeled shoes).
- Keep your hard hat on at all times and wear any additional personal protective equipment that was provided to you.
- Keep a safe distance from the perimeter of the building or work area. Do not lean or rest against any handrail or guardrail systems.
- Watch where you walk! Be cautious of slick or wet surfaces and tripping hazards.
- Do not cross any barricades, yellow caution tape, or red danger tape.
- Be aware of overhead hazards, such as crane loads, scaffold systems, or people on ladders.
- Be aware of moving equipment, such as trucks, forklifts, and backhoes. Equipment operators may have difficulty seeing you.
- Do not try to climb ladders or scaffold systems without permission. Maintain a three-point contact while climbing ladders.
- Keep your eyes open! Pay attention to your surroundings and watch your step.
- Always stay with your guide and speak up if you suspect an unsafe act or condition.

While these rules may seem strict, we ask you to follow them because, at the end of your visit, the only mark we want you to leave with is a better understanding of who we are and the exciting work that we do.
